

LEAD INGOT

Counterweights

ver. 01.01.v01

multisectorial

DESCRIPTION

Lead is one of the heaviest metals. Its density of 11.3 g/cm³ makes it the ideal material for use as ballast or counterweight in the widest variety of applications.

Our standard pieces are immediately delivered, or we can custom-design our pieces to meet our clients' specific needs.

Among the different standard pieces, ingots are the most common products, always available at the most competitive price.

APPLICATIONS

Ballast of machinery, cranes, lifting equipment, trucks, cars, etc.

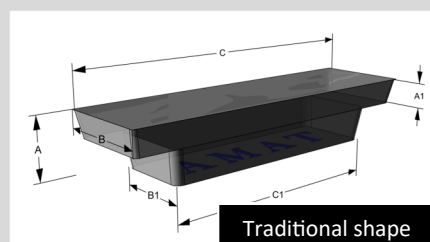

COMPOSICIÓN

Composition is usually not relevant for this application.
Minimum lead content is 97%.

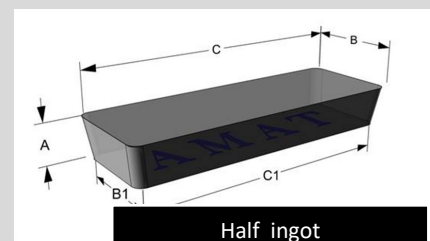

FORMATS

Standard ingots are the following:

(mm)	A	A1	B	B1	C	C1	
Traditional 10 Kg	45	20	80	65	355	250	
Traditional 25 Kg	70	30	115	90	395	280	
Half Ingot 11 Kg	40	-	100	90	290	280	

Traditional shape

Half ingot

DELIVERY

Both 10 kg and 25 kg ingots are standard pieces immediately available, up to 2,000 kg.

For orders above this weight, delivery time is usually one week.
